DOCUMENT TYPE- A

PUBLICATION DATE- 2000-09-22

PATENT PRIORITY INFO- 11003187, 1999-01-08, Japan

INTERNATIONAL PATENT CLASS- G09F00937

APPLICANT(S)- CANON INC

PUBLICATION COUNTRY- Japan

PROBLEM TO BE SOLVED: To obtain an electrophoretic display device which embodies a memory characteristic stable for a long period of time without depending upon an electrode holding charge and without requiring switching control of an open state.

SOLUTION: Colored charge particles 7 dispersed in a colored insulative liquid 6 and an insulative coloring liquid 6 are held within the closed spaces enclosed by a transparent display substrate 1, a counter substrate 2 and partition walls 3. Transparent electrodes 4 are arranged on the transparent display substrate 1 in the respective closed spaces and counter electrodes 5 on the counter substrate 2. The transparent electrodes 4 and the counter electrodes 5 have fixing surfaces 14 at which the colored charge particles 7 gather. Tacky adhesive layers 8 which allow the repetitive adsorption and peel of the colored charge particles are arranged on the surfaces of these fixing surfaces 14, by which the electrophoretic display device is constituted.
